

FIRST COLONY LID

PROTECT *Your Drains!*

ONLY RAIN DOWN THE DRAIN!

Scoop the Poop, Save Our Streams

Properly clean up after your pet and use designated receptacles for waste. This prevents contamination of our waterways, keeping our communities cleaner and safer.

Leaves, Grass, and Stormwater Protection

Each year, tons of leaves and grass clippings end up in storm drains, posing a threat to our waterways. As yard waste decomposes, it releases nutrients that promote the growth of harmful algae and aquatic weeds, disrupting the balance of our ecosystems. Prevent localized flooding by keeping drains clear.

Keep Fats, Oils, and Grease Out of Our Waterways

Pouring fats, oils, and grease (FOG) down drains can clog pipes, cause sewage overflows, and pollute waterways. Proper disposal protects plumbing, wildlife, and the environment.
